

LANDMARKE[®]

VINYL RAILING SYSTEM

Where Value Meets Performance!

- ICC AC-174 Compliant
 - Limited Lifetime Warranty
 - T-Top Rail • Offered in White & Khaki
 - Aluminum Reinforced Top/Bottom Rails
 - 1-3/8" Turned or Square Balusters
 - Packaged Railing Kits w/Hardware
 - Hidden Stainless Steel Hardware
 - Unique Patented Bracket System
 - Rail Aluminum Inserts Fasten Direct To Hidden Aluminum Bracket Bases
 - Easy to Install with Standard Tools and Provided Hardware
 - Secure One Piece Bracket Cover
 - Bracket Adapters Support 0°- 45°
 - Stair Bracket Supports 28° - 45°
-

Level Railing Offered in 6' , 8' & 10' Lengths • Stair Railing Available in 6' & 8' Lengths
Choose from 36" or 42" Railing Heights

- **Hidden Hardware** – Internal aluminum mounting system eliminates external screws and bulky brackets.
- **Slim-Line Railing Profile** - Proportionate in size (top and bottom rails nearly the same width).
- **Aluminum Mounting Bracket** – Contractor has more flexibility installing the aluminum mounting brackets onto the post ahead of time and allowing the contractor to preassemble the railing and drop the complete railing onto the brackets. It is great for commercial work where the contractor can pre-cut and assemble railing in their shop and bring it out to the job.
- **Once Piece Level Bracket Covers** – One piece bracket cover easily wraps around the aluminum mounting bracket and profile and snaps into the patented aluminum mounting bracket grooves in the back of the aluminum mounting bracket making it a permanent fixture. Both top and bottom bracket covers install the same way.
- **One Piece Stair Bracket** – Pre-cut slope has some unique features that make for an easy install. The front of the stair bracket fits the profile snug however it tapers outward towards the back to allow for a 28-45 degree angle. Also comes with 4 plugs to hide the screws.
- **Exceptional Strength Aluminum Profile** – The combination aluminum profile (top and bottom) and the 1-3/8" Pickets fits perfectly inside of the aluminum which gives it additional strength.
- **Mounts Anywhere** – Compact adapter brackets handle many mounting scenarios, such as round columns from 0-45 degrees. The aluminum mounting bracket snaps into the adapter allowing for an installation using the same level cover clips.
- **Exceptionally Versatile** – Hide low-voltage wiring or irrigation tubing through space within the aluminum supports.

LandMarke Vinyl Railing was engineered from the ground up starting with the aluminum. We designed an aluminum shape that will handle 10' Residential (IRC) and 8' Commercial (IBC) and provide years on enjoyment with lasting beauty. The aluminum shape is designed to handle 1-3/8" pickets with the picket snug against the aluminum, it allows for additional strength and will cut down or virtually eliminate any vibrations in the picket from the wind.
